MAILSECUR™

THE NEW STANDARD IN MAIL SECURITY

Your first line of defense: With MailSecur you can safely “see inside” incoming mail with live video scanning and keep your people safe.

RaySecur is the first manufacturer of dedicated mail security scanners to receive official designation from the DHS as a Qualified Anti-Terrorism Technology (QATT) under the United States SAFETY Act.

"The MailSecur device is a disruptive technology. It is transforming mail screening detection capabilities."

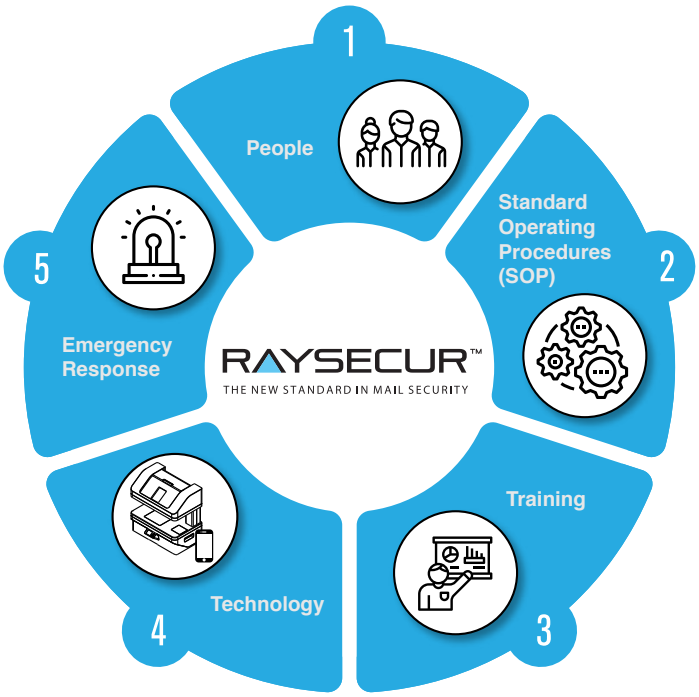
Christian West, CEO
AS Solution

"RaySecur's technology fills a critical gap in mail security not addressed by X-ray systems… We added the MailSecur device to our mail screening procedures."

Perry Sumpter
Raytheon

Thousands of companies every year receive threats through the mail. MailSecur from RaySecur gives you a real-time view into the contents of mail and packages. Currently mailrooms are the weak link in the security chain. But with MailSecur, you use safe millimeter wave (mmWave) technology -- with a sensitivity that's 10 times greater than the mmWave tech used by the U.S. government in airports -- to quickly detect packages with potential threats.

RaySecur enhances your mailroom security in all Five Pillars of Mailroom Security.



People:
While your staff will be the first line of defense and the primary operators of MailSecur, RaySecur supplements them with 24/7 remote support to help interpret unexpected images and determine if they constitute a threat.

Standard Operating Procedures:
We help companies develop SOPs for the proper inspection of incoming mail and packages across their entire organization, including high-, medium-, and low-risk sites, how to detect threats, and what to do when they are found.

Training:
In RaySecur's Mail Security Learning Platform your team will learn not just how to properly operate MailSecur, but mail security best practices. In addition to interactive courses, the Platform includes ebooks, SOPs, infographics, and other materials that will be useful to your team.

Technology:
RaySecur's MailSecur detects more and smaller threats than any other mail scanner and is perfectly suited to high- and medium-risk sites. We have other products to enhance the security across your entire enterprise, including low-risk sites.

Emergency Response:
When a potential threat is detected, RaySecur's EODSecur team will help your people quickly determine how to handle it and escalate it to the proper authorities in keeping with your established SOPs.

The MailSecur Advantage

3D Real-Time Imaging

MailSecur's exclusive 360° Rotation™ Video Imaging technology exposes mail contents instantly. Operators watch a live video as they move objects by hand in MailSecur, allowing full 3D dynamic imagining for detection of suspicious items compared to 2D static imagining with X-rays.

Letter bombs, dirty bombs, harmful powders and liquids, incendiary devices, weapons, hoaxes, and traditional CBREs, as well as new emerging threats from mail weaponization can all be detected in real-time with MailSecur's 3D images.

Safe for the Operator

MailSecur provides superior 3D images with safe mmWave technology and eliminates exposing operators to dangerous X-rays. MailSecur operators do not need costly certification. And sites avoid the need for licensing for radiation management and safety programs.

Real-Time Expert Screening Support

MailSecur is backed by EOD expert remote support avoiding the need to maintain highly-trained experts on staff.

Military-trained explosive ordnance disposal (EOD) experts are only a click or call away 24/7. All systems support remote login for our EOD experts providing you with the same level of expertise as if our EOD techs were in your mailroom.

QATT Designation by DHS

The United States Department of Homeland Security (DHS) has designated MailSecur as a Qualified Anti-Terrorism Technology (QATT).

Detects More and Smaller Threats than X-ray Scanners

Using safe millimeter wave technology, MailSecur detects all of the threats that X-ray mail scanners can -- including more and smaller ones – and it is 300 times more sensitive than X-rays for detecting harmful powders and liquids.

Lightweight, Portable, Quick and Easy to Set Up

MailSecur is about the size of copier and can be set up on a desktop or table in minutes. It can easily be moved within your facility or even to other locations. MailSecur is the only scalable mail screening solution that can be quickly and easily deployed across many sites and geographies to protect an entire enterprise.

Simple and Intuitive

With MailSecur you can detect potentially dangerous items on site in just a few seconds, eliminating the need to do your mail screening in a remote location.

MailSecur is the superior solution for detecting hoaxes, such as powders and liquids, and other threats that have eluded traditional detection equipment.

MailSecur is revolutionizing mail inspection by eliminating cost and technical skills as barriers to affordable, reliable mail screening. Why should only one or two of your sites have safe mail? MailSecur is the first scalable solution to ensure that all of your sites are protected.

3D real-time imaging

Designed for letter and package screening

MANUFACTURED BY AN ISO 9001-CERTIFIED ORGANIZATION

MailSecur is Superior to X-Ray Screening

X-ray scanners have their place. They are especially useful when you need to inspect large boxes. But the vast majority of threats come in small packages, and to see inside them nothing beats MailSecur.

Using safe millimeter wave technology detects everything that X-ray mail scanners can, and in smaller quantities, and is 300 times more sensitive than X-rays for detecting powders and liquids.

"No other technology can do this — truly unique and a game changer for mailroom security."

Ken McGovern
Security Consultant and X-Ray Expert

MailSecur's mmWave tech provides superior threat detection showing even the smallest objects in real-time 3D video. Most conventional X-ray scanners can only show static, 2D images.

mmWave tech is so safe that operators do not need costly training and certification to use it -- unlike X-ray technologies.

Unlike static, 2D X-ray mail scanners, MailSecur can detect liquids and powders as they move around in a package, as well as many other types of threats that would get past an X-ray scanner.

X-rays fail the MailSecur Threat Detection Challenge:

SUBSTANCE	MAILSECUR™	X-RAY SCANNERS
CHEMICAL	x	
BIOLOGICAL	x	
RADIOLOGICAL	x	
NUCLEAR	x	
EXPLOSIVES	x	x
DANGEROUS ITEMS	x	x
CONTRABAND	x	x
SUSPICIOUS POWDERS	x	
SUSPICIOUS LIQUIDS	x
